The Safety Lab NZ

ELEVATING YOUR HEALTH AND SAFETY STANDARDS

Did you know that, amongst other duties, the Health and Safety at Work (General Risk and Workplace Management) Regulations 2016 requires a PCBU to identify hazards that could give rise to reasonably foreseeable risks to health and safety?

At The Safety Lab NZ, we recognise that businesses often need to grapple with the ever-changing and challenging landscape of health and safety, which frequently hinders them from ensuring top-tier legislative compliance and alignment. These challenges are often against the backdrop of limited time and human resources, sometimes without a dedicated health and safety specialist to fall back on, which can lead to a reliance on old or outdated information and practices that end with the wrong action being taken and accidents happening, even though the intent of the advice comes from the right place.

Unified Health and Safety Excellence

As your independent Health, Safety and Wellbeing advisor, we exist to bridge the gap between health and safety knowledge and its application, to help you navigate your health and safety duties and ensure that you, your business and your people are protected so far as is reasonably practicable. We don't just ensure safety, we offer you tailored solutions, up-to-date professional advice, and hands-on training and development. This enables us to craft strategies that prioritise the balance of safety and uninterrupted business operations.

Contact The Safety Lab NZ today to partner with us and empower your business with dedicated health, safety and wellbeing strategies designed with your specific needs in mind.

What is The Safety Lab NZ?

The Safety Lab NZ is a leading health, safety, and wellbeing consultancy providing organisations with tailored and bespoke occupational health, safety and wellbeing services.

What problems do we solve for our customers?

We recognise the challenges businesses of every size can face in maintaining health and safety standards due to limited time, human resources, or lack of an in-house specialist to help. Our services aim to shoulder the load with you and remove the pain points associated with achieving high standards for health and safety and occupational risk management.

What value do we add or provide to our customers?

The Safety Lab NZ offers expert advice refined from over two decades of experience working with organisational leaders through to front-line staff in businesses of varying sizes, which provides us with the insight to develop and deliver comprehensive but simplified strategies, practical training and awareness to ensure the highest safety standards are met through the professional management and reduction of physical and psychosocial risks and liabilities.

Why should you partner with us?

By partnering with us, we will help you not only to ensure your health and safety compliance and raise the bar with your health and safety standards, but you will also gain a strategic ally that works to understand the intricacies of your operations and the importance of uninterrupted business continuity.
